

## How it Works

### Training Sessions:

- Scoring One Measure
- Creating a Flexible Battery for a Subject
- Creating a Fixed Battery for a Study Database
- Searching Norms before Testing a Subject
- Selecting Your Favorite Norms and Studies
- Playing with Meta-Analysis Feature
- **My Preferences Settings**
  
- More Study Information
- More Stratification Settings
- Norms, Abnorms, and Unique settings
- Summary Sheet Page

Welcome to NeuroPsychNorms

# How it Works

## My Preferences Settings

- Preferences are available for only Scoring and Searching pages
- Select age ranges, pediatric and/or adult
- Select if want to search beyond your subject's age, for example, search +/-5 years in age from your subjects (default= 0)
- Look for norms, abnorms (dx), or unique (e.g., retest data)
- Select minimum N size
- Age/ED Q (select if you only want real ranges provided by study, Default is all real, calculated, estimated, median)
- Type of Publication, year, country, language, and ethnicity

Set Preferences

# How it Works

## My Preferences Settings

- Preferences are available for only Scoring and Searching pages
- Select age ranges, pediatric and/or adult
- Select if want to search beyond your subject's age, for example, search +/-5 years in age from your subjects (default= 0)
- Look for norms, abnorms (dx), or unique (e.g., retest data)
- Select minimum N size
- Age/ED Q (select if you only want real ranges provided by study, Default is all real, calculated, estimated, median)
- Type of Publication, year, country, language, and ethnicity
- When finished, select set preferences, \*please note if you are not getting many results may be do to restricting preferences
